## IMPROVED GREASE FITTINGS FOR 42" AND 48" MOWERS

To facilitate lubricating the center spindle bearing on the 42" and 48" mowers new grease fittings and related parts have been released for production. This improvement allows access to lubricate the spindle from the top of the deck and from the left side.

If it is desired to install the new fittings in a previously produced unit the following procedure should be followed.

1. Loosen the four lock nuts holding the center spindle housing to the deck.
2. Remove the original grease fitting #4566.
3. Assemble the 90° elbow, #943021, to the 1/8" pipe nipple, #7911, and screw the nipple into the spindle housing until the elbow lines up with the access hole in the deck.
4. Retighten the spindle housing to deck nuts.
5. Install the new 90° grease fitting, #7891, and position so that it can be reached from the left side.

### PARTS INVOLVED

#### New Parts

1-7891 Fitting  
1-7911 Pipe Nipple  
1-943021 Elbow

#### Old Parts to be Removed

1-4566 Fitting
