SUBJECT: TRANSMISSION LUBRICANT

The 1964 tractor manuals specify that a good grade of S.A.E. #40 Gear Lubricant be used in transmissions. The red caution tag attached to each tractor specified S.A.E. #90. The use of either type oil will not affect the warranty on the 1964 model tractors; however WE RECOMMEND THAT S.A.E #40 BE USED.

Extensive testing has proved that fewer gear locking conditions occur while using S.A.E.#40. Correct lubricant level is an important factor also.

S.A.E. #40 Engine Oil in lieu of S.A.E. #40 Gear Lubricant is approved.
